Patient & Family Instructions

Auditory Brainstem Response/Otoacoustic Emissions Testing (ABR/OAE Testing)

Date: ________________________________

Time: ________________________________

You have been scheduled for the testing mentioned above. Please report to the 5th floor, ENT Department at The Kirklin Clinic of UAB Hospital and proceed to the front desk to register. If you cannot keep your appointment, please call (205) 934-9766 as soon as possible to reschedule.

The **ABR** test is designed to give your doctor information about the functionality of your inner ear organs. You will be lying down, and the audiologist will scrub your forehead and behind your ears before attaching electrode stickers. After the electrodes are in place, earphones will be placed in your ear canals. You will hear a loud series of clicks. During this test, it is best that you relax as much as possible and keep your eyes closed. No responses are needed from you. It is very important that you stay as still as possible. Any movement (especially eye movement) can cause interference and affect the reliability of the test.

The **OAE** test is similar to a hearing test. We will try to test you in an area that is as quiet as possible, most likely inside the hearing test booths that you may have used previously. You will hear a series of tones through a special earphone that we will place in your ear canal. You will not need to respond to any sounds that you hear. Your ear will actually do all the work for you.

These tests today will take approximately 60 to 75 minutes to complete.

**WE ASK THAT YOU FOLLOW THESE INSTRUCTIONS EXACTLY:**
1. You will not be able to wear your glasses.
2. Apply no facial makeup (foundation) or other skin preparations before testing due to the sticky electrodes that will be used during the test.

If you follow these directions, the tests can be conducted more easily and make your doctor’s diagnosis and treatment more accurate. If you have questions about any of these instructions, call our office at 205-934-9766 to speak with your doctor’s nurse.
