

**PGY2 Solid Organ Transplant Pharmacy Residency:** The PGY2 Solid Organ Transplant Pharmacy Residency at UAB Hospital is a one-year program designed to provide extensive experience with adult abdominal and cardiothoracic patients, in both acute care and ambulatory environments, that will build upon skills developed as a clinical pharmacist during a PGY1 residency. Its focus is the development of the skills and confidence necessary to autonomously provide advanced pharmacotherapy management to patients in solid organ transplant settings, qualify the resident for clinical pharmacy specialist positions in transplantation, and prepare the graduate to attain board certification in the specialized practice area (when board certification exists).

### Orientation

- Orientation provides a general overview of the departmental organization, support units, and resident responsibilities.
