The UAB School of Health Professions’ Department of Physical Therapy and the UAB Medicine Department of Rehabilitation Services are launching two new residency programs: orthopaedics and neurology. A unique partnership between UAB’s nationally ranked academic and clinical enterprises, the residency programs are designed to help therapists elevate their practice, advance their knowledge, educate other providers, engage in research, and become professional and civic leaders in their community.

These residencies accomplish in one year what otherwise might take many years to achieve professionally. Our programs teach residents to provide advanced patient/client management services with high quality and value, demonstrate excellence in teaching, and contribute to the development and application of evidence-based practices.

Why choose UAB?

- 12-month curriculum spanning the continuum of care at a Level I Trauma Center with over 1,500 diverse diagnoses
- Large, academic medical center with opportunities for inpatient, outpatient, and acute care experience
- Develop leadership and interprofessional skills
- Cultivate teaching skills
- Opportunities for research
- No tuition costs
- Excellent health care
- Expand clinical knowledge and skills with 1:1 mentoring

Target enrollment for the program is fall 2017. Applicants should be DPT graduates and licensed or eligible for license in the state of Alabama. This is not yet an ABPTRFE candidate program.
