

Thermage® CPT™ is a non-surgical radiofrequency (RF) procedure that tightens the skin and generates new collagen. With a vibrating handpiece, pulsating energy, and cooling burst technology, this treatment ensures superior patient comfort. Over 1 million Thermage® CPT™ treatments have been performed worldwide. Unlike a facelift, Thermage® treatments allow us to treat and reduce the signs of aging, including mildly lax, wrinkled skin on the face and neck in a non-surgical way.

BENEFITS

- Non-invasive brow and jowl lift for sagging skin
- Very safe with no downtime
- Non-surgical skin tightening

HOW IT WORKS

The Thermage® procedure is a non-invasive treatment that uses patented radiofrequency energy and delivers this energy to the skin with a sophisticated treatment tip. As the deep tissues are heated, the top skin layers are protected with a unique cooling spray. This deep volumetric heating causes the skin to tighten and new, healthier collagen to grow, producing a more youthful appearance.

WHAT TO EXPECT

Your visit for Thermage® can take up to 3 hours. Thermage has a vibrating handpiece, pulsating energy, and cooling burst technology for patient comfort. We also offer various forms of medication for comfort as required. We require that patients arrange an escorted ride home after the procedure due to the use of medication. Patients must not operate machinery for 12 hours after the treatment. This includes driving an automobile.

This treatment can be painful. There are alternative treatments such as ThermiSmooth and Pelleve that have little to no pain.

WHEN TO RESUME NORMAL ACTIVITIES

You may resume your normal activities immediately following the procedure, including applying makeup.

RESULTS

Some clients feel an initial tightening immediately following the procedure. However, most results appear gradually in 3 - 6 months. Each person is unique, and results vary.

RECOMMENDED SESSIONS

Repeat treatment every 6 months to 1 year and can be paired with ThermiSmooth or Pelleve Eyes, BOTOX® cosmetic, and JUVÉDERM® or other dermal fillers for optimal results.

POSSIBLE DOWNTIME

- Possible mild swelling
- Possible small crusting / scabbing
- A tender feeling

POST-TREATMENT CARE

- If you experience any scabbing or crusting, apply polysporin for 3 days.
- Resume normal skin care activities immediately post-treatment.
- Due to the medication administered, we recommend that you rest for 12 hours following the treatment
